## 第二次小测答案

## EX1

1

相对于总指令数

$$1-\frac{1}{1.05}\approx 4.76\%$$

相对于load指令数

$$rac{1-rac{1}{1.05}}{26\%}pprox 18.3\%$$

2

后续指令需要使用\$1寄存器时; \$1和\$2为同一个寄存器 (能正确理解替换策略,言之有理即可)

## EX2

$$TP_{base} = rac{n}{T_{base}} \ = rac{n}{k\delta t + (n-1)\delta t} \ n >> k$$
时  $(TP_{base})_{max} = rac{1}{\delta t} \ TP_{pred} = rac{n}{T_{pred}} \ = rac{n}{k\delta t + (n-1)\delta t + npq(k-1)\delta t} \ n >> k$ 时  $(TP_{pred})_{max} = rac{1}{\delta t + pq(k-1)\delta t} \ (TP_{pred})_{max} = rac{1}{\delta t + pq(k-1)\delta t} \ (1 - rac{(TP_{pred})_{max}}{(TP_{base})_{max}}) = 1 - rac{rac{1}{\delta t + pq(k-1)\delta t}}{rac{1}{\delta t}} \ = rac{pq(k-1)}{1 + pq(k-1)}$
